

January 7, 2022

Dear Mohamed Tahiri:

The Regional English Language Office at the U.S. Embassy in Rabat is pleased to welcome applications for the second phase of the online English Academic Writing course for doctoral students in Science, Technology, Engineering and Math (STEM), focused on fields related to Environmental Studies and Energy, to be held in the winter of 2022 and taught by a Virtual English Language Fellow and funded by the U.S. Department of State.

We would like to request your support in sharing this opportunity with doctoral schools in STEM fields throughout Morocco to invite current full-time doctoral students focusing on alternative energy innovations and other solutions to the climate crisis to apply for this course.

Interested students should apply through the following link no later than January 16, 2022:
<https://www.surveymonkey.com/r/BQJZMHW>.

Should you have any questions, please do not hesitate to contact my colleagues Firdaous El Hamdi (elhamdiF@state.gov) or Ameer Benhami (BenhamiA@state.gov) at the U.S. Embassy in Rabat.

Thank you very much for your support in advertising this opportunity among STEM Doctoral schools in Morocco. We hope that this project will aid us in achieving mutual Moroccan and American goals related to these fields by assisting promising PhD candidates in presenting and publishing their research in English, leading to increased international cooperation on this important front.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Jen MacArthur', with a long horizontal line extending to the right.

Jen MacArthur
Regional English Language Officer
U.S. Embassy Rabat
