

**COURSES TAUGHT
IN ENGLISH
AT INSA
TOULOUSE**

| FOR EXCHANGE STUDENTS

INTRODUCTION

Founded in 1963, **INSA Toulouse is an international and multidisciplinary public engineering school** that offers a 5-year higher education degree programme leading to the “Engineering Degree”, equivalent to a Master of Science or MEng.

The curriculum is divided into three phases:

- > **Year 1:** a common track for all engineering students to acquire fundamental knowledge
- > **Year 2 and 3:** 4 pre-specializations
- > **Year 4 and 5:** 8 specializations within 7 departments

The curriculum was designed to develop the autonomy of the students, letting them build their own professional projects step by step while acquiring robust scientific knowledge and developing both specific and transversal skills. INSA Toulouse students are given the opportunity to discover different activities and jobs by visiting companies, completing short to medium-term internships, and attending conferences and meetings.

Education at INSA Toulouse is closely linked to **top-level research**, seeking to enhance its students’ ability to imagine and develop the technologies of the future. As part of its commitment to the research policy of the University of Toulouse, INSA Toulouse:

- > has laboratories linked to each engineering department;
- > has academics and researchers carrying out dynamic research in internationally recognized laboratories (CNRS, INRA, MESR);
- > provides research training for all its engineering students throughout their curriculum (<http://www.insa-toulouse.fr/en/recherche.html>).

INSA Toulouse is a member of the **ECIU University**, the first European university where learners, teachers and researchers cooperate with cities and businesses to **solve real-life challenges** (<https://www.eciu.org/>).

INSA Toulouse has also been awarded the “**Welcome to France**” label, which rewards the quality of service for international students.

BECOMING AN EXCHANGE STUDENT AT INSA TOULOUSE:

All students may be exchange students at INSA Toulouse, provided that their home institution signed a Cooperation Agreement (Erasmus + or bilateral agreement) with INSA Toulouse. Exchange students are welcome to all INSA Toulouse departments **for up to 2 semesters**.

Students are required to **choose the majority of their courses in one department** in order to prevent scheduling conflicts. 1 ECTS credit represents around 30 hours including in-class lectures and personal academic work. The learning agreement for one semester cannot exceed 30 ECTS credits and must be set up in close collaboration with the international academic coordinator of the host department.

For further information regarding the application, the preparation of the Learning Agreement and contacts details, please visit: <https://international.insa-toulouse.fr/en/international-students/exchange-semester/apply/>

Contact: welcome@insa-toulouse.fr

French as a Foreign Language, Foreign Languages and English-taught Humanities

INSA Toulouse offers 2 types of French language courses for its international students: in August as a **Summer School** and **throughout the year** via its Humanities Department (CSH). **Students are advised to choose FLE courses even if they only follow courses taught in English.**

INSA Toulouse also offers its international students foreign languages courses (Chinese, German, Italian, Portuguese, and Spanish) and other English-taught courses - listed at the end of this brochure.

For further information, please consult: <https://csh.insa-toulouse.fr/fr/international.html>

Contact: welcome@insa-toulouse.fr

ECIU University **The European Consortium of Innovative** **Universities:**

If you need to complete your learning agreement, or simply wish to widen your experience, you can apply to ECIU University challenges and join an international and multidisciplinary team to tackle concrete challenges and develop innovative solutions, under the guidance of a teamcher who has the task of facilitating communication. The challenges originate from a city, region, company or a public institution.

You will also get the opportunity to sign up for ECIU University micro-modules that will help you acquire the knowledge and skills you need to solve the challenge and/or deepen specific knowledge.

More information about where to apply for ECIU University learning opportunities can be found under: <https://engage.eciu.eu/>

For further information, please consult: <https://international.insa-toulouse.fr/fr/etudiants-insa/eciu-university/>

<https://engage.eciu.eu>

TABLE OF CONTENTS

1- SCIENTIFIC COURSES

UNDERGRADUATE / BACHELOR LEVEL

- Applied Mathematics (Modeling, Computer Science and Communication)
- Applied Physics (Materials, Components and Systems Engineering)
- Chemical, Biochemical and Environmental Engineering

MASTER LEVEL

- Applied Mathematics
- Applied Physics
- Biological Engineering
- Electrical and computer engineering (includes Automatic Control and Electronics & Computer Science and Networks)
- Chemical Engineering and Environment
- Civil Engineering
- Mechanical Engineering

2- HUMANITIES

- Foreign languages & English-taught humanities
- French as a Foreign Language

The courses are categorised according to the language of instruction:

- *FULL ENG : course taught in English, Q&A in English, teaching materials in English*
- *MIX : course taught in French, Q&A in English, teaching materials in English*
- *FACE TO FACE: autonomous student projet fully supervised in English*

APPLIED MATHEMATICS

The rise of Machine Learning and Artificial Intelligence (AI) has reinforced the ever-growing need of Computer Science and Applied Mathematics skills to process, exploit and analyze this data, perform numerical simulations, gain a deeper understanding of complex systems and high-tech products, and predict their behavior. Data Science and AI are increasingly sought after by the transportation, environment, security, health, e-commerce, and insurance sectors, among others.

To this end, the training provides:

- > A broad spectrum of methods and techniques in Applied Mathematics
- > Long-lasting fundamentals and a solid culture of engineering sciences
- > A deep mastery of IT tools
- > Thorough knowledge of management techniques

KEY:

CC: Core Curriculum

Opt. 1/2 > Choose 1 course among 2

Opt. 2/4 > Choose 2 courses among 4

Opt. 3/8 > Choose 3 courses among 8

APPLIED PHYSICS: MICRO & NANO TECHNOLOGIES

The Applied Physics specialization program trains engineers with a broad scientific spectrum to prepare them to cope with the technical and scientific challenges of tomorrow, including:

- > Energy transition (energy efficiency, energy storage and conversion, renewable energy production, etc.)
- > Digital society (quantum materials, technologies and devices)
- > Global health (micro- and nano-systems for biology, health and environmental analysis, etc.)
- > Mobility and infrastructure (materials, transportation structures and components, aeronautics and space, etc.)

The Applied Physics specialization provides students with the technical and creative knowledge to be able to:

- > Bring innovation to the field of cutting-edge technology
- > Be part of a team and contribute to responsible development
- > Easily adapt to an ever-changing industrial world

The main areas of training are the physics of materials and components, nanotechnology, sensors, instrumentation, testing and measurement.

UNDERGRADUATE (MATERIALS, COMPONENTS AND SYSTEMS ENGINEERING - IMACS)

BIOLOGICAL ENGINEERING

The objective of the Biological Engineering specialization is to train engineers who master the whole set of methodologies dealing with the biological conversion of biotic and non-biotic materials, from the laboratory to the industrial scale.

Biological engineers design and develop new biocatalysts (enzymes and microorganisms) that meet industrial constraints, and calculate and optimize the performance of biological reactors and extraction-purification processes.

ELECTRICAL AND COMPUTER ENGINEERING DEPARTMENT

The Electrical and Computer Engineering department offers two distinct programs within the following fields: Automatic Control and Electronics, and Computer Science and Networks.

The Electrical and Computer Engineering department is equipped with a platform dedicated to connected objects, including several USRPs (Universal Software Radio Peripherals - fully reconfigurable equipment for the implementation of wireless communications), IoT cards (ST Microelectronics, Intel, NXP, etc.), antennas, oscilloscopes, spectrum analyzers and laptop PCs. This platform is used to study, design and implement communication protocols dedicated to communicating objects, as well as the security of these protocols.

The Electrical and Computer Engineering department is equipped with a hardware platform dedicated to characterizing the electromagnetic compatibility of electronic equipment. It comprises an anechoic chamber, antennas, spectrum analyzers, RF power amplifiers and TEM cells, enabling the measurement of electromagnetic emissions and immunity to electromagnetic interference between 150 kHz and 6 GHz.

The objective of the Automatic Control & Electronics specialization is to train engineers who can apply their skills to automatic control, signal processing, electronics and computer science, the design process of complex systems and the development of the automatic control subsystem or the electronic and microelectronic subsystems, while implementing the associated IT tools.

AUTOMATIC CONTROL AND ELECTRONICS

4TH YEAR | MASTER 1

	Course title	Teaching languages	Course code	ECTS
SEMESTER 1 September - January	> Analysis of Complex Systems	MIX	I4AESY11	6
	> VHDL and Reconfigurable Digital Circuits	FULL ENG	I4AESE41_02	3

COMPUTER SCIENCE AND NETWORKS

The objective of the Computer Science & Networks specialization is to train engineers who master the software development process and the design of complex, communicating and networked-distributed computer systems, while complying with safety standards and/or real-time constraints. Engineers graduating from this program are outward-looking, able to communicate and innovate while being aware of the socio-economic complexity of the business. The Internet of Things and Artificial intelligence are considered major industrial evolutions and strategic key points for companies. It pushes the boundaries when it comes to gathering, analyzing and sharing massive digital data.

4TH YEAR | MASTER 1

CHEMICAL ENGINEERING AND ENVIRONMENT

The aim of the GP3E training is to train engineers able to deal with the major societal challenges of water, energy and the environment, so that they can become proactive players in today's socio-economic world and the leaders of energy transition, circular economy and adaptation to climate change.

In order to address the Water, Energy and Environment challenges, its engineers must be proficient in basic sciences and have an in-depth understanding of the basic concepts of chemical engineering, in addition to social and communication skills, and the ability to manage and lead professional teams at both the national and international stages.

The department trains its students into becoming expert engineers in: Drinking water production and water treatment; Processes & energy; Eco-design; Environment; Methanization; Carbon accounting; Renewable energies and energy efficiency; Waste treatment and valorization; and Sustainable chemical engineering.

CIVIL ENGINEERING

The teaching and research missions of the Civil Engineering department are geared towards the construction sciences. The department trains managers who can operate at all stages of a construction project.

INSA Toulouse civil engineers intervene in the following areas:

- > Building: structural systems, technical and comfort equipment, etc.
- > Public works: infrastructures, bridges, roads, earthworks, etc.
- > Urban planning: spaces, public roads, clean-up campaigns, networks, etc.

In 4th year (MSc1), students must choose one major:

- > Structural Engineering: structural design for buildings, infrastructure, design and production of civil engineering structures, geotechnical design

- > HVAC and Building physics: understanding and design of technical and comfort elements: heating, acoustics, energy, electricity and smart homes.

In 5th year (MSc2), four professional orientations are available:

- > Civil Engineering
- > Structural Engineering
- > HVAC and Building physics
- > Durability of Construction

As well as three interdisciplinary programs: Urban Engineering, Energy and Risk engineering.

The Civil Engineering department also prepares researchers and teacher-researchers to join public or private research laboratories of major companies.

4TH YEAR | MASTER 1

SEMESTER 1 September - January	Course title	Teaching languages	Course code	ECTS

	> ID-RIMS Binders and concretes. Mix design and environmental impact – part “Mix design”	MIX	KGCD9AVU (submodule)	1.5

CONTACT : aurelie.papon@insa-toulouse.fr

MECHANICAL ENGINEERING

The objective of the Mechanical Engineering specialization is to train general engineers with a proper balance of scientific, technological and systems knowledge.

The training offered by this program takes into account all the data related to the life of a product or system, from its preliminary design to its production and potential recycling, all within a concurrent engineering approach.

- > The 4th year of Mechanical Engineering is devoted to furthering knowledge of mechanical engineering (systems architecture, automatic control, thermodynamics, fluid mechanics, computational mechanics, design, industrialization, etc.).
- > The 5th year provides all the extra tools to ensure a perfect transition towards the job market. Students will choose a major: Structures, Eco-design, Fluids Engineering or Manufacturing.

HUMANITIES

The Humanities Department (CSH) courses aim to develop both specific knowledge and soft skills in French, English and another foreign language:

In years 1, 2 and 3, students develop general skills in professional communication: oral presentations, report writing, documentary research, document synthesis, etc.

In years 4 and 5, students acquire skills in group facilitation and scientific and technical communication: communication in the context of project management and

conflict management, presentation and synthesis of technical or scientific data, etc. Language teaching also includes interculturality.

The main goal of the teaching teams is to prepare students for the job market and to put their actions into perspective by taking into account social, economic, ethical and cultural contexts.

The courses in French as a Foreign Language (FLE) aim to support students in the acquisition of the French language.

FOREIGN LANGUAGES & ENGLISH-TAUGHT HUMANITIES
